Car Size Fare Structure Poll

Final 3/10/10

- Q1 The Transportation Commission is required to consider ways to manage vehicle demand and reduce congestion in peak periods on the ferry system, which will delay the need for more and/or larger boats and terminals.

One possible approach is to provide a discount for cars significantly under the current 20 foot standard, while moderately increasing the fares for all other vehicle categories.

Would you be supportive of this kind of fare structure?

Respondents:
