

## HOW TO READ A CROSSTAB

To find the results for specific questions for a specific subgroup (e.g. women, residents who support new revenue):

1. Read down the left side of the table until you find the question you are interested in.
2. Read across the table until you find the column for the subgroup you are interested in.
3. The intersection of the Row and Column show the results for that question for that subgroup.

The numbers and percentages in the "All" columns show the statewide results. Subsequent columns show the results for that particular subgroup. Percentages for each question add up vertically to 100%. By reading across the rows for a question, you can compare the results from different subgroups.

**Example:** The numbers highlighted in yellow show in the Peninsula RTPO, 2% of residents would give the WA State Transportation System an "A" grade. By contrast, in the SWRTC RTPO 6% (red highlight) would give the Transportation System an "A"
